

### **POWER FLOC**

Overfill the pool. Turn filter off. Turn multiport to circulate or whirlpool. Put filter back on. Pour Powerfloc into the pool and allow it to circulate 3 to 5 hours.

### **TURN FILTER OFF OVERNIGHT.**

The next day, vacuum on waste or drain. Keep garden hose filling into the pool as you vacuum—the pool will empty quickly. Start in the deep end. Shut off if pool drains down too low. Allow to overfill again. Turn filter on and repeat vacuuming on drain/waste until pool has been completely vacuumed.
